Full-stack Developer (Java, Angular)

Contract Type: Full time and available immediately
Gratification: according to experience and profile
Key Words: Java, Angular, MySQL, Docker, Agile
Publication Date: May 04, 2022

Do you want to join an innovative and dynamic company? Join us!
Genomic Vision is a French biotechnology company developing genetic tests using proprietary technology, Molecular Combing, which allows, through the direct visualization of individual DNA molecules, to detect quantitative and qualitative changes in the genome. Genomic Vision provides innovative solutions worldwide and molecular diagnostic tools for in vitro diagnostics, the pharmaceutical industry as well as academic laboratories.
This position is an **office-based position** in the **Paris area, France**.

Missions:

Within the BioIT department at Genomic Vision, you will be involved in the design, development, testing, and integration phases of scientific applications related to the structural analysis of single DNA molecules.
You will work on the creation of new applications as well as on the evolution of existing ones (the redesign of databases, update of technical environments, Java 8 migration to a higher version). You will work on the backend as well on the frontend evolution in an Agile environment. You will evolve in a highly multidisciplinary context and will collaborate with biologists and engineers in image processing and data analysis. The role will report to the BioIT leadership and ensure compliance with the product development and launch process.

Essential Responsibilities

- Analysis of requirements, functional and technical design
- Design and develop applications with best practices
- Carry out unit tests and bug fixes
- Participate in the product launch and user support
- Presentation of work to management and participation in the feature definition process of future product versions
- Writing development specification documents

Success Factors

- Focused, proactive, and motivated
- Able to work efficiently in a multi-cultural, multi-language, and changing environment
- Open-minded and able to learn from other team members
- Able to work autonomously and as a part of a team of technical experts
- Able to understand and solve complex problems

- Creative and innovative

<u>Requirements</u>

- Education: bac +4/5 in informatics/information technologies or natural sciences
- Experience: 0-2 years
- Skilled in Java 8 and superior (Spring, Rest, Maven, Jacoco, JPA, Hibernate, Tomcat)
- Angular (JWT, RxJS)
- HTML CSS (Flexbox, grid…)
- MySQL databases
- Knowledge in Git and Docker
- Fluent French and/or English
- Knowledge of NoSQL databases React of Vue is a plus
